Microsoft Office LTSC Standard 2024 Datasheet

Office LTSC 2024 is a locked-in-time version of the familiar Office apps, with performance improvements, expanded accessibility, and five years of mainstream support. It is a licensing option that lets device partners acquire Office and preinstall it on embedded devices. It replaces the ISV-Reseller option previously offered under the Open program and serves the same customers and scenarios.

Ideal use cases:

- Regulated devices that cannot accept feature updates
- Process control devices on the manufacturing floor
- Specialty systems that cannot connect to the internet
