Manage the cost of AI innovation

AI is creating unprecedented levels of opportunity for business growth, however realizing its full value will require a clear understanding of its economic impact.

As enterprises accelerate AI adoption, CIOs face a new challenge: **balancing innovation with financial accountability.**

Every AI workload, model interaction and automated process consumes resources, generates spend and introduces operational complexity.

The organizations that succeed will not simply deploy AI faster — they will manage it smarter.

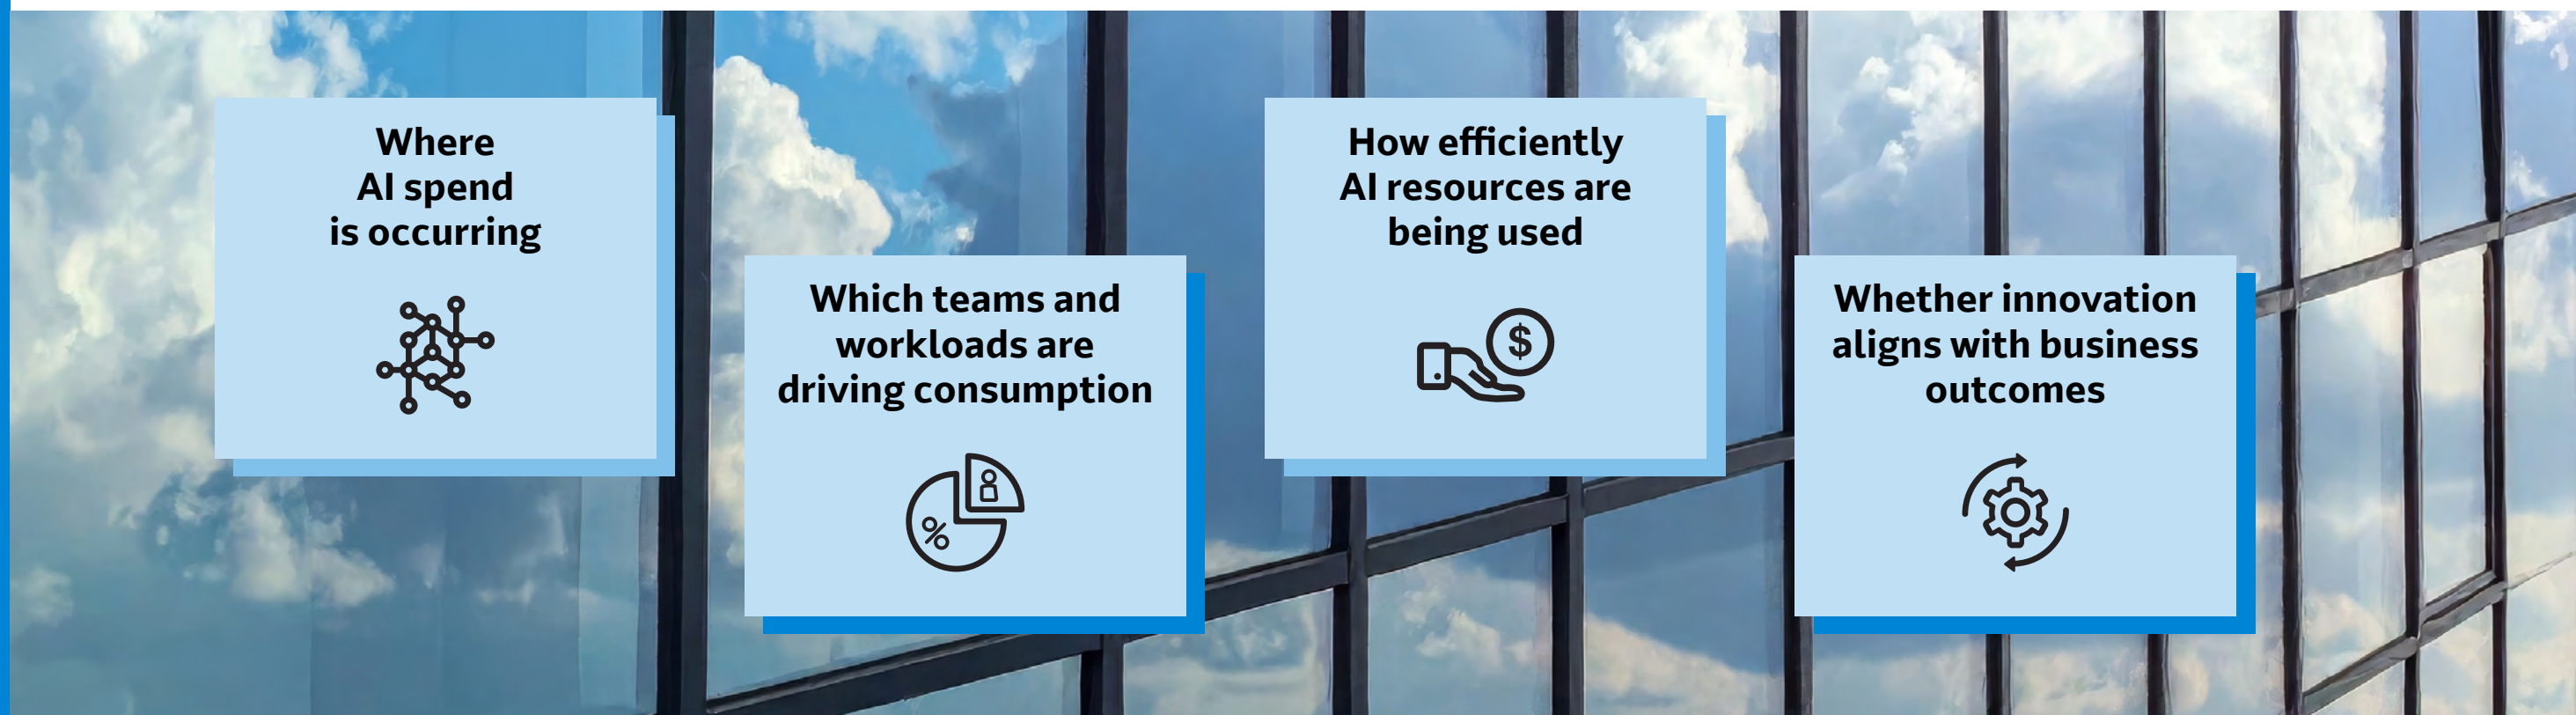

CloudHealth helps CIOs bring visibility, governance and financial control to the rapidly evolving economics of AI.

From managing infrastructure to managing intelligence

Cloud costs are no longer limited to infrastructure. AI introduces a new operating model where intelligence itself has a measurable cost.

As AI-powered applications scale across the business, CIOs need to understand:

CloudHealth provides a unified view of cloud and AI-related spend so organizations can optimize performance without slowing innovation.

Build an AI-ready financial operating model

AI changes how technology teams operate, how budgets are allocated and how accountability is measured.

CloudHealth helps organizations evolve from reactive cloud management to proactive financial operations by enabling teams to:

Inform

Make AI and cloud spend visible, measurable and understandable across the organization.

Optimize

Reduce waste, improve efficiency and maximize the value of every cloud and AI investment.

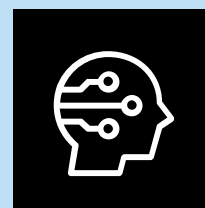

Operate

Establish policies, accountability and controls that prevent cost chaos as AI adoption grows.

Turn FinOps into a strategic advantage

As AI adoption expands, **FinOps becomes a critical CIO priority.**

CloudHealth supports both:

AI for FinOps

Using AI to improve how organizations manage and optimize cloud costs

FinOps for AI

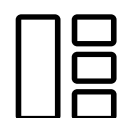

Ensuring AI itself operates efficiently, transparently and cost-effectively

Together, these capabilities help organizations **move faster while maintaining financial discipline.**

Designed for the new CIO agenda

Today's CIOs are expected to drive transformation, accelerate innovation and deliver measurable business value — all while maintaining operational control.

CloudHealth helps technology leaders:

**Benchmark efficiency
across teams and
workloads**

**Align AI
investments to
business priorities**

**Improve forecasting
and financial
accountability**

**Create transparency
across multi-cloud
environments**

**Scale AI
adoption with
confidence**

The future of AI requires financial clarity

AI is reshaping the economics of enterprise technology. Organizations that gain visibility and control today will be better positioned to innovate tomorrow.

CloudHealth gives CIOs the insight needed to manage cloud and AI investments with confidence, efficiency and accountability.
